3. INTRODUCTION

Background to the Problem

Mental health issues are becoming more widespread because of social pressure, loneliness, work stress, and family problems. In Bangladesh, many people still avoid seeking help due to social stigma, lack of awareness, and limited access to professional mental health services.

To address this, the "MindEase Oasis" project has launched an AI-powered web platform that offers mental health support and doctor consultations. Users can sign up, take self-assessment quizzes, chat with an AI chatbot to share their feelings, and get professional advice when necessary. If the system identifies a high-risk situation, it suggests consulting a real doctor. Users can then easily book appointments, make payments, and speak with doctors either online or in person.

The platform also features an admin dashboard that helps manage users, doctors, and payments, ensuring everything runs smoothly and builds trust. The main goal of MindEase Oasis is to make mental health care more available, private, and free from stigma for all people.

Targeted Audience

- Students and Young Adults: Individuals dealing with academic pressure, social anxiety, or the transitional stresses of early adulthood.
- Working Professionals: Individuals dealing with occupational stress, burnout, and difficulties in maintaining a healthy work–life balance.
- Individuals in Remote or Underserved Areas: Populations with limited access to mental health services and professional support.
- Individuals Hesitant to Seek Therapy: Those who are reluctant to pursue professional mental health services due to social stigma or concerns regarding privacy and confidentiality.
- General Users: Individuals seeking regular emotional support, motivation, and resources for personal development and self-improvement.

Solution to the Problem

The MindEase Oasis project aims to develop an AI-powered mental health support platform that enables users to communicate privately with an AI chatbot, complete a mental health self-assessment test, and schedule consultations with licensed doctors. The system includes key features such as user registration and login, confidential AI chatbot interaction, automated test result evaluation, doctor appointment booking for audio/video/offline sessions, secure online payment (sent directly to the Admin account), feedback submission, and separate dashboards for users, doctors, and the admin. These combined features ensure a complete, accessible, and reliable digital solution for mental-wellness support within one unified platform.
The target users include individuals seeking emotional support, patients who require medical guidance, registered mental health professionals, and the system administrator. Users benefit from instant AI support, personalized suggestions, risk based alerts, and convenient appointment scheduling. Doctors receive a structured dashboard to manage profiles, view patients, and update consultation notes. The admin can manage all users, doctors, payments, and system operations. Overall, the solution provides a modern, user-friendly, and stigma-free platform that enhances accessibility, ensures privacy, and offers an effective digital pathway for improved mental health care.

4. REQUEIREMNT SPECIFICATION

4.1 System Features

Item No	As a/an	I want to	So that	Acceptance Criteria
1	Paid User	Register and log in securely	I can access my personalized dashboard based on my specific role.	Validate inputs, encrypt passwords, and redirect to the correct dashboard (Person, Doctor, or Admin).
2		Interact with an AI-driven chatbot	I can receive instant emotional support and engage in supportive conversations.	The chatbot must provide real-time responses and maintain a conversational flow for emotional support.
3		Provide ratings and reviews after sessions	the platform can improve its service quality and others can see doctor performance.	Users can submit stars and comments; data must be stored in the database and be viewable by the Admin.

4		Complete a mental health self-assessment test	I can understand my current emotional state and receive automated guidance.	Calculate scores instantly, display results, and recommend a doctor if the calculated risk is high.
5		Book an appointment for online or offline sessions	I can consult with a doctor according to my preferred schedule.	Display available slots, confirm bookings, and send notifications to both the user and the doctor.
6		Process payments through a secure gateway	I can confirm my doctor appointments safely and reliably.	Process payments securely, send a confirmation message, and update the Admin transaction records.
7		Have my data protected and give consent	my privacy and confidentiality are maintained at all times within the platform.	Require user consent for data collection, ensure secure data transmission, and provide privacy settings.
8		View my personalized dashboard.	I can manage my activities and records efficiently.	Users can see test results and chat history; Doctors can see patient lists and consultation notes.
9		See payment limits.	I do not accidentally overpay for a consultation.	The system should restrict payment beyond the allowed consultation fee and show a warning if the payment exceeds the limit.
9	Non-Paid User	Browse mental health resources and public information	I can learn about mental wellness before creating an account.	The system should allow access to blogs, FAQs, and public awareness content without requiring login.
10		Access limited AI chatbot interaction	I can experience basic emotional support before subscribing.	The chatbot should allow a limited number of free messages per day and display a subscription prompt after the limit is reached.
11		View available doctors and consultation fees	I can decide whether I want to use the platform services.	The system should display verified doctor profiles, specialization, ratings, and consultation

				fees without exposing private patient information.
12		Register for an account	I can upgrade to a paid user and access full platform	The registration form should validate user input, prevent duplicate email accounts, and send a verification confirmation.
13		Receive emergency hotline suggestions	I can quickly access urgent mental health support during a crisis.	The system should display emergency hotline numbers and support resources when high-risk keywords are detected.
14		View platform policies and privacy guidelines	I can understand how my data will be handled before using the service.	Privacy policy and terms & conditions pages must be accessible publicly without login.
15		Contact support through a public form	I can report issues or ask questions without signing in.	The system should allow message submission and send confirmation that the request was received.
16		Upgrade from non-paid to paid membership	I can unlock premium features such as appointments and unlimited chatbot access.	The system should redirect the user to a secure payment and subscription page and activate paid features after successful payment.
17	Admin	Review and approve the credentials of newly registered doctors.	I can ensure only licensed and qualified professionals are providing advice on the platform.	System must provide a "Pending Approval" list for new doctor registrations. I. Admin must be able to view uploaded medical licenses/certifications. II. Admin can toggle a "Verified" status which enables the doctor's profile

				for public booking.
18		View, edit, or suspend user and doctor accounts.	I can manage community standards and handle account-related issues or reports of misconduct.	Searchable database of all registered users and doctors. I. Ability to "Deactivate" an account to prevent login. II. Logs showing when and why an account was modified.
19		Monitor all incoming payments for doctor consultations.	I can track revenue and make sure all payments go to the admin account before being sent out.	A dashboard view showing transaction ID, user name, doctor name, amount, and timestamp. I. Filter options by date range and payment status (Success/Failed).
20		Receive notifications or view a log of users identified as "High-Risk" by the AI.	I can ensure the system is successfully nudging these users toward professional help and monitor safety trends.	A dedicated "Risk Alert" tab in the dashboard. I. The list must show the severity level and whether the user followed the suggestion to book a doctor.
21		Access a comprehensive view of all scheduled, completed, and canceled appointments.	I can resolve disputes between doctors and patients regarding missed sessions.	A master calendar or list view of all appointments. Ability to view the consultation type (Audio, Video, or Offline).
22		Update or modify the self-assessment quiz questions and scoring logic.	The assessments remain scientifically relevant and aligned with mental health standards.	A CRUD (Create, Read, Update, Delete) interface for quiz questions. I. Ability to define the "High-Risk" threshold score that triggers a

				doctor recommendation.
23		Review and manage the feedback submitted by users regarding their consultation experiences.	I can identify low-performing doctors or address technical issues within the platform.	A moderation queue for user-submitted reviews. I. Option to flag or hide reviews that violate terms of service
24		View a log of all administrative actions taken within the dashboard.	There is accountability and a trail of changes for security and auditing purposes.	Automatic logging of actions like "User Deleted," "Payment Refunded," or "Quiz Modified." I. Logs must include a timestamp and the specific Admin ID who performed the action.
25	Doctor	Register a professional profile and upload credentials	Patients can find and book consultations with me through the platform.	The system allows uploading of specialization, bio, and license; profile becomes visible only after Admin approval and verification.
26		Set and manage my weekly availability schedule	Users can only book appointments during my available time slots.	A calendar interface allows blocking or opening time slots; users cannot book outside set hours and receive an error if they try.
27		Receive and manage incoming appointment booking requests	I can accept or decline consultations based on my schedule and availability.	Booking requests display patient name, Online/Offline consultation, and preferred time; doctor can confirm or decline with a reason.
28		Conduct secure video and audio consultations with	I can provide remote mental health support to	A stable video/audio stream must connect both parties at the scheduled

		patients	users who book online sessions.	time with end-to-end encryption; chat fallback is available if video fails
29		View patient details, self-assessment scores, and previous consultation notes	I can prepare adequately for each session and provide personalized, informed advice.	Dashboard shows patient name, AI-assigned risk level, assessment score, and all prior consultation notes for that patient.
30		Write and update consultation notes for each patient after a session	I can maintain accurate medical records and monitor patient progress over time.	Notes are saved, timestamped, and retrievable in future sessions; they are accessible only to the assigned doctor and protected from patient view.
31		View my earnings and payment history for all completed consultations	I can track my consultation fees and verify that payments are processed correctly.	Dashboard shows consultation ID, patient name, session type, fee amount, and payment date for each completed transaction.
32		Receive real-time notifications for new bookings, cancellations, and upcoming session reminders	I stay informed about schedule changes without needing to manually check the dashboard.	Instant alerts are triggered for new appointments and cancellations; a reminder notification is sent 15 minutes before each session is due to start.
33	Guest	Browse the homepage without registration	I can understand the platform services before signing up	Homepage should display platform overview, services, and navigation options properly.
34		View available doctors and their profiles	I can decide whether I want consultation	Guest can view doctor name, specialization, ratings, and consultation fees but cannot book without registration.
35		Access mental health awareness blogs/articles	I can learn about mental health issues	System should allow guests to read public blogs/resources without login.
36		Use emergency hotline information	I can quickly get urgent help during mental crisis	Emergency contacts must be visible and accessible without requiring login.

37		Register as a new user	I can access platform services	System should validate required fields and create account successfully.
38		Contact customer support	I can ask questions before registration	Guest should be able to submit inquiries through contact form/email/chat support.
39		View platform pricing/package details	I can know consultation costs before signing up	System must display updated consultation charges clearly.
40		Access FAQ section	I can get answers to common questions quickly	FAQ page should load properly and show categorized questions/answers.

4.2 System Quality Attributes

Item No.	Category	Description
1	Security & Privacy	The system must implement end-to-end encryption for all chat logs and video consultations, ensuring that sensitive mental health data is accessible only to the authorized user and their assigned doctor.
2	Usability	The user interface must be designed with high accessibility standards, featuring a calm color palette and intuitive navigation so that individuals under high emotional stress can use the platform without feeling overwhelmed.
3	Availability	The platform should maintain a 99.9% uptime to ensure that users experiencing a mental health crisis can access the AI chatbot and self-assessment tools at any time, 24/7.
4	Performance (Latency)	The AI chatbot must provide responses within 2 seconds of a user's message to maintain a natural conversation flow and provide immediate support.
5	Scalability	The system architecture must support a horizontal scaling strategy(increases system capacity by adding more servers or nodes), allowing it to handle a sudden surge of up to 10,000 concurrent users without degradation in performance, especially during peak hours or awareness campaigns.
6	Reliability	In the event of a system failure during a payment or booking process, the system must perform an automatic rollback of the transaction to prevent financial loss and maintain user trust.
7	Data Integrity	The system must perform automated daily backups of the database to a secure off-site server, ensuring that patient medical notes and appointment histories can be recovered in the event of a primary server failure.
8	Maintainability	The platform should use a modular microservices design with clear API

		documentation, so developers can update the AI model or payment system without affecting the whole system.

4.3 System Interface

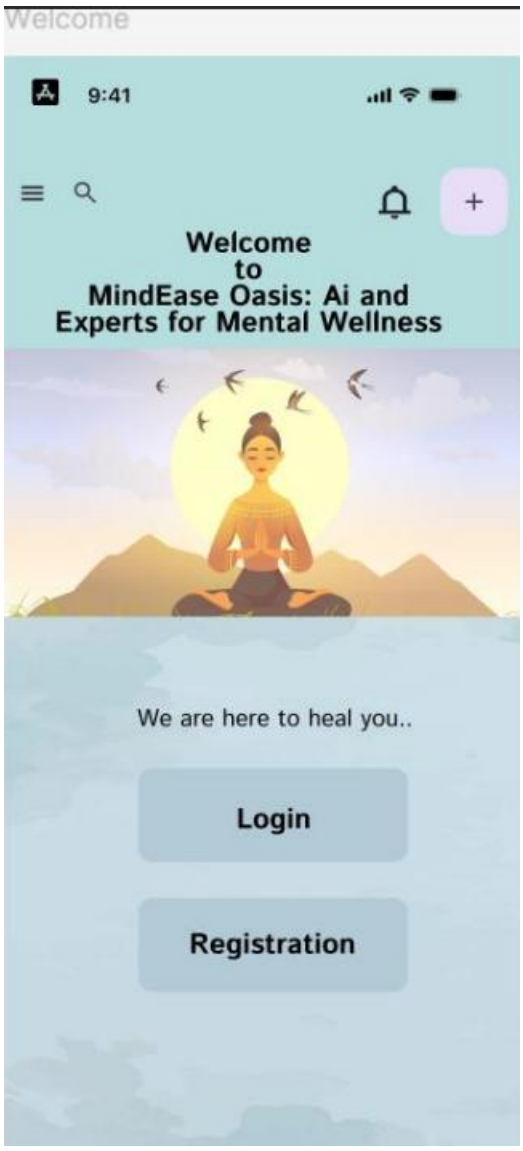

Figure 1: Homepage

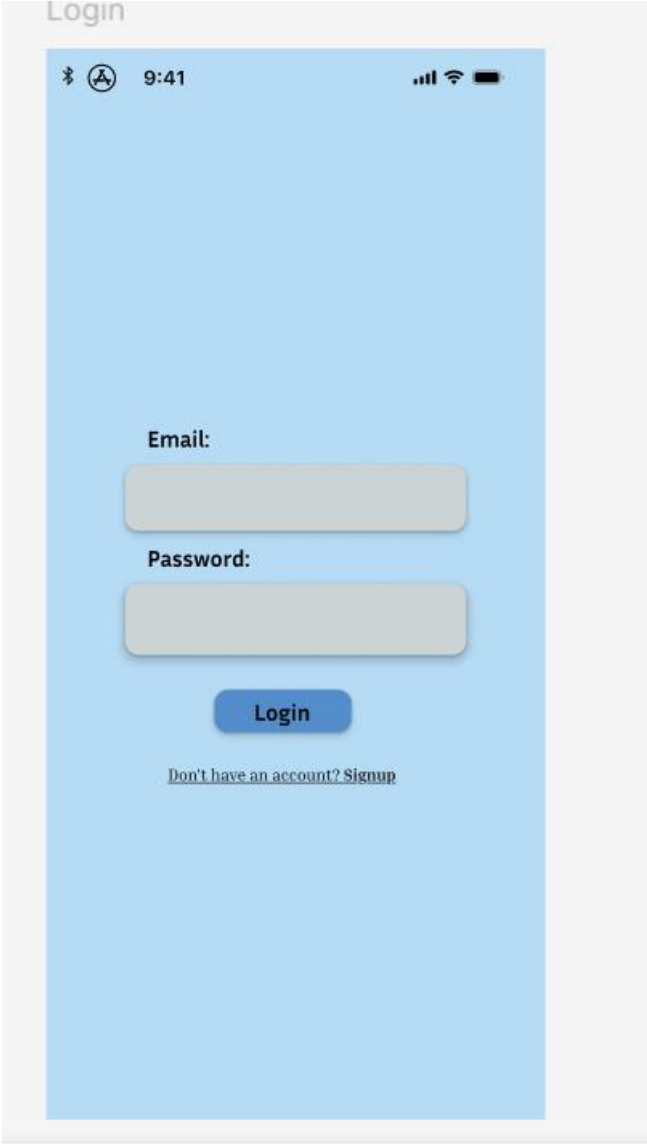

Figure 2: Login

4.4 Project Requirements

- Total Budget – 8,50,000 BDT: This estimation covers high-tier secure hosting (essential for medical data), API costs for AI model integration (like OpenAI or Gemini), professional licensing for SSL certificates (HTTPS encryption, secure data transmission), and a development team consisting of a Full-Stack Developer, a UI/UX Designer, and a Tester.
- Total Development Time - 10 Months:
    - Months 1-2: Research, UI/UX Design, and Database Architecture.
    - Months 3-7: Core Development (AI Chatbot, Appointment system, Payment gateway).
    - Months 8-9: Strict QA Testing, Security Auditing, and Beta testing with real doctors.
    - Month 10: Final Deployment and Admin Training.
- Security & Compliance Environment: The system must operate within a HIPAA-compliant cloud environment. All PII (Personally Identifiable Information) and medical notes must be encrypted at rest using AES-256 standards to ensure patient-provider confidentiality.
- Resource Constraints: The project requires a dedicated Mental Health Consultant to verify the accuracy of the AI's self-assessment logic and a Legal Consultant to ensure the platform adheres to Bangladesh's Digital Security Act regarding telemedicine and online payments.
- Technical Infrastructure: The platform must be optimized for low-bandwidth environments (3G/4G connectivity) to ensure accessibility for users in remote or underserved areas of Bangladesh, requiring lightweight frontend frameworks and efficient data caching.
- Integration Dependencies: The project is constrained by the approval and integration timelines of third-party local payment gateways (e.g., SSLCommerz or bKash) and the availability of licensed medical professionals for the pilot phase.

5. FEATURES NOT TO BE TESTED

- Third party payment systems like bKash, Nagad, SSLCommerz because these are controlled by external companies and outside our project scope. Our system will only test whether payment is completed successfully.
- User internet problems during audio/video consultation because internet connection depends on the user's own network.
- Doctor's personal devices such as microphone, camera, laptop issues because these are not controlled by the system.
- Email/SMS delivery issues because notification services are handled by third-party providers.
- AI model training process because our project only tests chatbot functionality, not how the AI model was trained.
- Emergency hotline service response because the platform only shows hotline information.
- Very old browser compatibility because outdated browsers are not supported.
- User mental health recovery progress because software testing cannot measure personal emotional improvement.

6. TESTING APPROACH

6.1 Testing Levels

- The testing process for the MindEase Oasis platform will consist of three major testing levels: Unit Testing, Integration Testing, and System Testing. These testing phases will ensure that all modules of the mental health platform function correctly, securely, and efficiently.

- UNIT TESTING:
  Unit testing will be performed by the developers to verify individual modules such as login/registration, AI chatbot, appointment booking, payment processing, and self-assessment features. Each component will be tested separately to ensure correct functionality before integration. Developers must provide test cases, outputs, and defect reports before approval from the development team leader.

- INTEGRATION TESTING:
  Integration testing will verify communication between interconnected modules of the system. This includes testing interactions between the AI chatbot and database, appointment booking with payment gateway, and doctor-patient consultation modules. The testing team and developers will jointly ensure that data flows correctly between all integrated components without errors.

- SYSTEM TESTING:
  System testing will evaluate the complete MindEase Oasis platform as a whole. This testing phase will ensure that all features including dashboards, chatbot support, doctor consultation, payment system, and security mechanisms work properly in a real-world environment. Performance, security, usability, and reliability of the system will also be validated during this stage.

6.2 Test Tools

The only test tools to be used are the standard AS/400 provided utilities and commands.

- The Program Development Manager (PDM) will be used as the source version configuration management tool in conjunction with the in-house check-in/check-out control utility. The check-in/out utility is part of each developer's standard AS/400 access menu.

- The initial prototypes for the new screens will be developed using the AS/400 Screen Design Aid (SDA). The initial layout and general content of the screens will be shown to the sales administration staff prior to proceeding with testing and development of the screens.

6.3 Meetings(teams meeting)

Item No.	Date	Duration	Description
1	30/04/26	38 minutes	Workload divided among all the members
2	05/05/26	25 minutes	Cross checking of each other tasks

7. TEST CASES/TEST ITEMS

Project Name: MindEase Oasis: AI & Expert Support for Mental Health			Test Designed by: Md. Farhat Anjam	
Test Case ID: FR_1			Test Designed date: 03/05/26	
Test Priority: Medium			Test Executed by: Md. Farhat Anjam	
Module Name: Admin Dashboard			Test Execution date:	
Test Title: Verify Doctor Profile Approval Process				
Description: Test the admin's ability to review and approve a new doctor's credentials.				
Precondition: A new doctor has registered and uploaded their license; Admin is logged into the Admin Dashboard.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Login as Admin 2. Navigate to the "Doctor Approvals" section. 3. Click "View Details" on the pending doctor profile. 4. Verify the attached documents. 5. Click the "Approve/Verify" button.	Username: admin Password: admin Doctor Name: Dr. Rahat License: [License_Image.pdf]	The doctor's status updates to "Verified," and their profile becomes visible to general users for booking.	As expected.	Pass
Post Condition: The doctor’s account status is updated to “Verified” in the database, their professional profile becomes visible and bookable in the public "Find a Doctor" directory, and an automated notification (email or SMS) is sent to the doctor confirming their approval.				

Project Name: MindEase Oasis: AI & Expert Support for Mental Health			Test Designed by: Md. Farhat Anjam	
Test Case ID: FR_2			Test Designed date: 03/05/26	
Test Priority: High			Test Executed by: Md. Farhat Anjam	
Module Name: Admin Dashboard			Test Execution date: 16/05/26	
Test Title: Verify Account Deactivation and Management Logging				
Description: Validate that an admin can deactivate a user account and that the system logs the "when" and "why" of the modification.				
Precondition: A target user profile exists in the database.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Open the Admin User Directory database and search for the user by name or email. 2. Click on the profile and select the "Deactivate" option. 3. Type a reason for deactivation in the mandatory text box and hit "Confirm." 4. Navigate immediately to the system modification logs.	Username: admin Password: admin User Email: exaple@gmail.com Deactivation Reason: Harassment	The user's status updates to "Deactivated" (blocking them from logging in), and a new log entry is created displaying the exact timestamp, Admin ID, and the typed reason.	As expected.	Pass
Post Condition: The deactivated user's active session tokens are immediately invalidated (forcing an automatic logout across all devices), any future login attempts using these credentials are blocked with an "Account Suspended" message.				

Project Name: MindEase Oasis: AI & Expert Support for Mental Health	Test Designed by: Md. Farhat Anjam
Test Case ID: FR_3	Test Designed date: 03/05/26
Test Priority: Medium	Test Executed by: Md. Farhat Anjam
Module Name: Quiz & Assessment Modification	Test Execution date: 16/05/26
Test Title: Verify Assessment Question CRUD and Threshold Management	
Description: Test the admin's ability to update a quiz question and reconfigure the threshold scoring logic that dictates "High-	

Risk" triggers.				
Precondition: Admin is logged in and navigates to the Content/Quiz Management console.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Locate the active mental health quiz structure configuration 2. Select an existing assessment question, click "Update", modify the text, and save. 3. Locate the "High-Risk Threshold Score" input box, change the number, and click "Save Logic".	Target Question ID: Q_04 New Threshold Score: 16	The system displays a success confirmation for both actions. The updated question text and the new scoring threshold are immediately active for live platform users.	Threshold logic is not working	Fail
Post Condition: The updated quiz question text is live across all user-facing self-assessment interfaces, the old threshold score (15) is overwritten by the new threshold score (16) in the database logic, and any quiz submitted from this timestamp forward is evaluated under the new criteria to trigger the high-risk doctor recommendation.				

Project Name: MindEase Oasis: AI & Expert Support for Mental Health			Test Designed by: Md. Farhat Anjam	
Test Case ID: FR_4			Test Designed date: 03/05/26	
Test Priority: Low			Test Executed by: Md. Farhat Anjam	
Module Name: Feedback & Reviews			Test Execution date: 16/05/26	
Test Title: Verify User Ability to Rate a Doctor				
Description: Test if a user can submit a rating and comment after a completed consultation.				
Precondition: An appointment has been marked as "Completed".				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Login as Patient 2. Navigate to "Appointment History". 3. Click on the "Rate Doctor" button for the completed session. 4. Select a star rating (1-5) and write a short review. 5. Click "Submit".	Username: patient Password: patient Rating: 5 Stars Comment: "Very helpful and understanding."	The feedback is saved, a "Thank You" message is displayed, and the doctor's average rating is updated on their public profile.	As expected.	Pass

Post Condition: The doctor's public profile is updated with the new rating, and the "Rate Doctor" button for that specific Appointment ID is disabled to prevent duplicate entries.

Project Name: MindEase Oasis: AI & Expert Support for Mental Health			Test Designed by: Sadia Fardeen Mahmood	
Test Case ID: FR_5			Test Designed date: 03/05/26	
Test Priority: High			Test Executed by: Sadia Fardeen Mahmood	
Module Name: Login/Registration			Test Execution date: 16/05/26	
Test Title: Verify Login with valid credentials				
Description: Test if a registered User/Doctor/Admin can log in successfully.				
Precondition: User must have a registered account and valid role in the system.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Go to the website 2. Enter valid Email 3. Enter valid Password 4. Click login button	Email: user@test.com Password: Password123	User should login and be redirected to the correct role-based dashboard.	As expected.	Pass
Post Condition: User is securely logged into the session, and the correct dashboard (Person/Doctor/Admin) is rendered.				

Project Name: MindEase Oasis: AI & Expert Support for Mental Health			Test Designed by: Sadia Fardeen Mahmood	
Test Case ID: FR_6			Test Designed date: 03/05/26	
Test Priority: Medium			Test Executed by: Sadia Fardeen Mahmood	
Module Name: AI Chatbot			Test Execution date: 16/05/26	
Test Title: Verify Chatbot response for emotional support				
Description: Ensure the AI provides a real-time conversational response to user input.				
Precondition: User must be logged into the application.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Open chatbot window 2. Type a message	Text: "I am feeling	The chatbot should provide a real-time	As expected.	Pass

3. Click send button	stressed."	supportive response.		
Post Condition: The chat message history is updated and stored securely in the database				

Project Name: MindEase Oasis: AI & Expert Support for Mental Health			Test Designed by: Sadia Fardeen Mahmood	
Test Case ID: FR_7			Test Designed date: 03/05/26	
Test Priority: High			Test Executed by: Sadia Fardeen Mahmood	
Module Name: Assessment			Test Execution date: 16/05/26	
Test Title: Verify test result and doctor recommendation				
Description: Check if high risk scores correctly trigger a doctor recommendation.				
Precondition: Assessment questions must be available in the module.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Start assessment 2. Select high-risk answers 3. Click submit	Ans: (All options showing high risk)	System should show the score and recommend a doctor consultation.	As expected.	Pass
Post Condition: Test score and specific recommendations are saved to the user's profile history				

Project Name: MindEase Oasis: AI & Expert Support for Mental Health			Test Designed by: Sadia Fardeen Mahmood	
Test Case ID: FR_8			Test Designed date: 03/05/26	
Test Priority: High			Test Executed by: Sadia Fardeen Mahmood	
Module Name: Booking System			Test Execution date: 16/05/26	
Test Title: Verify successful appointment booking				
Description: Test if selecting an available slot confirms the booking.				
Precondition: Registered doctors with available slots must exist.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Open booking page 2. Select doctor 3. Select time slot 4. Click confirm	Doctor: Dr. ABC Slot: 10:00 AM	Appointment should be confirmed and both parties notified.	As expected.	Pass
Post Condition: The selected slot is locked (marked as unavailable for others), and booking details are				

saved in the appointment database.

Project Name: MindEase Oasis: AI & Expert Support for Mental Health			Test Designed by: Zarir Zaman	
Test Case ID: FR_9			Test Designed date: 04/05/26	
Test Priority: High			Test Executed by: Zarir Zaman	
Module Name: Doctor Registration & Profile			Test Execution date:	
Test Title: Verify Doctor Profile Registration and Credential Upload				
Description: Test that a doctor can successfully register a professional profile and upload credentials (specialization, bio, license), and that the profile is hidden until Admin verification.				
Precondition (If any): Doctor has valid credentials (license PDF/image). Registration page is accessible. Admin account is available for verification.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Go to the Registration page and Select role: "Doctor" 2. Fill name, email, password, specialization, bio and upload a valid license 3. Submit form 4. Login as Admin and navigate "pending approval" 5. Verify the doctor's profile is listed as "Pending". 6. Confirm profile is NOT visible in public "Find a Doctor" directory yet.	Name: Dr. Rahat Email: rahat@gmail.com Password: Doctor Spec: Psychiatry License: [License_Image.pdf] Username: admin Password: admin	Registration succeeds. Doctor profile status "Pending Approval", Profile not visible to users until Aadmin approves	As expected.	Pass
Post Condition: Doctor account exists in the database with status "Pending". Profile is hidden from the public list. Admin sees entry in the Pending Approval section.				

Project Name: MindEase Oasis: AI & Expert Support for Mental Health	Test Designed by: Zarir Zaman
Test Case ID: FR_10	Test Designed date: 04/05/26
Test Priority: High	Test Executed by: Zarir Zaman

Module Name: Doctor Availability Schedule			Test Execution date:	
Test Title: Verify Doctor can set and manage weekly availability				
Description: Test that a doctor can open or block time slots on the availability calendar and that user cannot book outside that defined hour.				
Precondition (If any): Doctor account is verified and approved by Admin. Doctor is logged in. At least patient user account exists				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Log in as doctor. 2. Navigate to "My Schedule" / availability calendar. 3. Open Monday 10:00 AM – 12:00 PM. 4. Block Wednesday 2:00 PM – 4:00 PM. 5. Save changes. 6. Log in as Patient. 7. Go to "Book Appointment" for this doctor. 8. Attempt to book Wednesday 3:00 PM (blocked slot). 9. Attempt to book Monday 11:00 AM (open slot).	Doctor: rahat@test.com Patient: patient@test.com/ Patient@123 Blocked: Wed 2 PM-4PM, Open: Mon 10AM-12PM	Open slots are bookable. Booking the slots shows an error: "This time slot is not available"	As expected.	Pass
Post Condition: Availability settings are saved in the database. The blocked slot is not selectable on the booking page. The open slot appears as bookable.				

Project Name: MindEase Oasis: AI & Expert Support for Mental Health			Test Designed by: Zarir Zaman	
Test Case ID: FR_11			Test Designed date: 04/05/26	
Test Priority: High			Test Executed by: Zarir Zaman	
Module Name: Doctor – Appointment Management			Test Execution date:	
Test Title: Verify Doctor Can Accept or Decline Incoming Booking Requests				
Description: Test that a doctor receives incoming booking requests with full details and can either confirm or decline with a stated reason.				
Precondition (If any): A patient has submitted a booking request for an available slot. Doctor is logged in and has pending requests.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Log in as a Patient; book an appointment (Audio) for Mon 11:00 AM. 2. Log in as Doctor. 3. Navigate to "Appointment	Patient: patient@test.com Session: Audio Time: Mon 11:00 AM Decline	Confirmed appointment appears in both dashboards. Declined request	Confirmation works as expected. Declined reason	Pass

Requests". 4. Verify request shows: patient name, session type (Audio), preferred time. 5. Click "Confirm" on the request → verify confirmation message. 6. Create a second booking request as Patient. 7. As Doctor, click "Decline" and enter reason: "Unavailable due to emergency". 8. Verify patient receives decline notification.	Reason: Unavailable due to emergency	shows reason and patient notified decline.	displayed correctly.	
Post Condition: Confirmed appointment stored with status "Confirmed". Declined appointment stored with status "Declined" + reason logged. Both parties receive system notifications.				

Project Name: MindEase Oasis: AI & Expert Support for Mental Health		Test Designed by: Zarir Zaman		
Test Case ID: FR_12		Test Designed date: 04/05/26		
Test Priority: High		Test Executed by: Zarir Zaman		
Module Name: Doctor – Patient Records Dashboard		Test Execution date:		
Test Title: Verify Doctor Can View Patient Details, Assessment Scores, and Prior Notes				
Description: Test that a doctor's dashboard correctly displays a patient's name, AI-assigned risk level, self-assessment score, and all previous consultation notes before or during a session.				
Precondition (If any): Patient has completed a self-assessment. At least one prior consultation note exists for the patient. Doctor is logged in and verified.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Log in as Doctor. 2. Navigate to "My Patients" or upcoming appointment. 3. Click on patient name to open their profile. 4. Verify: patient name, AI risk level, self-assessment score are displayed. 5. Scroll to "Consultation Notes" section. 6. Verify all prior notes are shown with timestamps. 7. Confirm notes section is NOT accessible when logged in as Patient.	Doctor: rahat@test.com Patient: patient@test.com Expected Risk Level: High Expected Score: 78/100 Prior Notes: 2 entries	Dashboard shows correct patient name. Risk level “High”, score 78/100 and 2 timestamped notes. Notes are hidden from patient view	All patient details, risk level and notes displayed correctly. Patient login confirms notes are not visible.	Pass
Post Condition: No data is altered. Audit log records that the doctor accessed the patient's profile. Patient notes remain accessible only to the assigned doctor.				

Project Name: MindEase Oasis: AI & Expert Support for Mental Health			Test Designed by: Md. Ashraful Kabir Tausif	
Test Case ID: FR_13			Test Designed date: 05/05/26	
Test Priority: Medium			Test Executed by: Md. Ashraful Kabir Tausif	
Module Name: Doctor – Public Resources			Test Execution date:	
Test Title: Verify Non-Paid User Can Access Public Mental Health Resources				
Description: Test whether a non-paid user can browse blogs, FAQs, and awareness resources without logging in.				
Precondition (If any): User is not logged into the system.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Open website homepage 2. Navigate to “Resources” section . 3. Click on a blog article or FAQ	Resource: “Managing Anxiety”	Public mental health resources should open successfully without requiring login.	As expected.	Pass
Post Condition: The non-paid user can continue browsing public resources without account registration.				

Project Name: MindEase Oasis: AI & Expert Support for Mental Health	Test Designed by: Md. Ashraful Kabir Tausif
Test Case ID: FR_14	Test Designed date: 05/05/26
Test Priority: High	Test Executed by: Md. Ashraful Kabir Tausif
Module Name: AI Chatbot (Limited Access)	Test Execution date:
Test Title: Verify Limited Chatbot Access for Non-Paid Users	
Description: Test if a non-paid user can send limited chatbot messages before receiving a subscription prompt.	
Precondition (If any): User is browsing as a guest/non-paid user.	

Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
2. Send messages repeatedly 3. Continue until limit is exceeded	Message: "I feel stressed today."	Chatbot should allow limited free responses and then display a subscription/upgrade message after limit is reached.	As expected.	Pass
Post Condition: Chatbot interaction becomes restricted until the user upgrades to a paid account.

Test Case ID: FR_15			Test Designed date:	
Test Priority: Medium			Test Executed by: Md. Ashraful Kabir Tausif	
Module Name: Doctor Directory			Test Execution date:	
Test Title: Verify Non-Paid User Can View Doctor Profiles and Fees				
Description: Test whether non-paid users can see verified doctor information and consultation fees.				
Precondition (If any): Verified doctor profiles must exist in the system.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Navigate to "Find a Doctor" page. 2. Select a doctor profile. 3. View profile details	Doctor: Dr. Rahat	Doctor specialization, ratings, and consultation fee should be visible without login.	As expected.	Pass
Post Condition: Doctor profile information remains publicly viewable while sensitive patient data stays protected.				

Project Name: MindEase Oasis: AI & Expert Support for Mental Health	Test Designed by: Md. Ashraful Kabir Tausif
Test Case ID: FR_16	Test Designed date: 05/05/26
Test Priority: High	Test Executed by: Md. Ashraful Kabir Tausif
Module Name: Registration System	Test Execution date:
Test Title: Verify Successful Registration from Non-Paid to Paid User	
Description: Test if a non-paid user can successfully create an account and upgrade access.	
Precondition (If any): Registration page must be active and accessible.	

Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Open registration page 2. Enter valid user information 3. Submit registration form 4. Verify email confirmation	Email: user@test.com Password: User123	Account should be created successfully and verification confirmation should be sent.	As expected.	Pass
Post Condition: A new paid user account is created and stored in the database.

Test Priority (Low, Medium, High): High			Test Executed by: Sanjida Chowdhury	
Module Name: Emergency Support			Test Execution date:	
Test Title: Verify emergency contact access				
Description: Test if guest users can access emergency hotline information.				
Precondition (If any): Website must be active.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Open homepage 2. Click emergency support section	Hotline Number: 999 Hotline Name: Mental Health Emergency Support	Emergency contacts should be displayed	Displayed successfully	Pass
Post Condition: Guest user successfully views emergency hotline information and can contact emergency support if needed.				

8. ITEM PASS/FAIL CRITERIA

The test process will be completed once all major modules of MindEase Oasis are tested successfully for a certain period of time. This includes registration, login, AI chatbot, assessment test, appointment booking, payment system, doctor consultation, feedback system, and admin dashboard.

Test Case ID	Test Title	Status (Pass/Fail)
FR_1	Verify Doctor Profile Approval Process	Pass
FR_2	Verify Account Deactivation and Management Logging	Pass
FR_3	Verify Assessment Question CRUD and Threshold Management	Fail
FR_4	Verify User Ability to Rate a Doctor	Pass
FR_5	Verify Login with valid credentials	Pass
FR_6	Verify Chatbot response for emotional support	Pass
FR_7	Verify test result and doctor recommendation	Pass
FR_8	Verify successful appointment booking	Pass
FR_9	Verify Doctor Profile Registration and Credential Upload	Pass
FR_10	Verify Doctor can set and manage weekly availability	Pass
FR_11	Verify Doctor Can Accept or Decline Incoming Booking Requests	Pass
FR_12	Verify Doctor Can View Patient Details, Assessment Scores, and Prior Notes	Pass
FR_13	Verify Non-Paid User Can Access Public Mental Health Resources	Pass
FR_14	Verify Limited Chatbot Access for Non-Paid Users	Pass
FR_15	Verify Non-Paid User Can View Doctor Profiles and Fees	Pass
FR_16	Verify Successful Registration from Non-Paid to Paid User	Pass
FR_17	Verify guest can access homepage	
FR_18	Verify guest can view doctor list	Pass
FR_19	Verify guest registration	Pass
FR_20	Verify emergency contact access	Pass

11. TESTING SCHEDULE

Time has been allocated within the project plan for the following testing activities. The specific dates and times for each activity are defined in the project plan timeline. The persons required for each process are detailed in the project timeline and plan as well. Coordination of the personnel required for each task, test team, development team, management and customer will be handled by the project manager in conjunction with the development and test team leaders. Schedule must be done using any project management tool. Don't make the schedule using MS word/ excel.

12. PLANNING RISKS AND CONTINGENCIES

Item	Risk	Description	Contingency
1	Data Breaches and Unauthorized Access to Patient History	Because MindEase Oasis handles sensitive mental health evaluations and private doctor consultation notes, any data leak or security breach would severely damage user trust, violate patient-provider confidentiality, and invite legal penalties under local data protection laws.	Implement strict end-to-end encryption for all video/audio streams and use AES-256 encryption for data at rest. Build a zero-knowledge architecture where raw text chat history is inaccessible to platform administrators, and perform automated, encrypted daily data backups to isolated secure cloud servers.
2	AI Chatbot Misdiagnosis or Failure to Escalate High-Risk Cases	The integrated AI chatbot might misinterpret a user's crisis state due to "hallucinations" or language nuances (such as mixing Bangla and English phrases), resulting in a failure to trigger critical human doctor recommendation flags during a severe mental health crisis.	Hardcode a robust, regular-expression-based keyword detection engine that scans specifically for high-risk Bangla, English, and "Banglish" phrases related to self-harm. When triggered, the system will instantly bypass the AI's natural language generation, lock the safety protocol, and present local emergency hotlines alongside an immediate, prominent link to book a licensed doctor.
3	Slow Adoption and Shortage of Verified Doctors at Launch	If professional mental health practitioners are hesitant to join the platform due to initial unfamiliarity or skepticism	Launch a targeted pre-onboarding campaign 3 months before deployment by partnering with local post-graduate psychology departments and private

		toward digital tools, users experiencing high-risk triggers will face long booking wait times, rendering the core digital gateway ineffective.	clinics in Bangladesh. Offer financial incentives, such as waiving platform commission fees for the first 50 verified doctors for their first 6 months, to guarantee a stable supply of professionals at launch.
4	High Attrition of Users Due to Persistent Social Stigma	Even with an online platform, users within the target audience (especially students and young adults) might abandon the self-assessment or booking processes midway due to an active fear of family discovery or deep-rooted social stigma surrounding therapy.	Design the platform to allow complete, unverified anonymity for the self-assessment and AI chatbot modules, requiring no real names or social media links to start. Use completely neutral, non-alarmist UI themes, and ensure bank statement descriptors for payment processing appear under a generic corporate parent name rather than a mental health label.
5	Third-Party Payment Gateway Integration and Approval Delays	Local payment processors (like bKash, Rocket, or SSLCommerz) often require lengthy compliance audits, merchant account verifications, and corporate paperwork, which can delay the deployment of the booking module and halt project launch timelines.	Initiate the merchant account application and compliance paperwork during the first month of the project (Requirements Gathering Phase) rather than waiting for the development phase. Utilize sandboxed dummy payment APIs to build and test the entire dashboard checkout architecture concurrently while awaiting official approval production keys.
